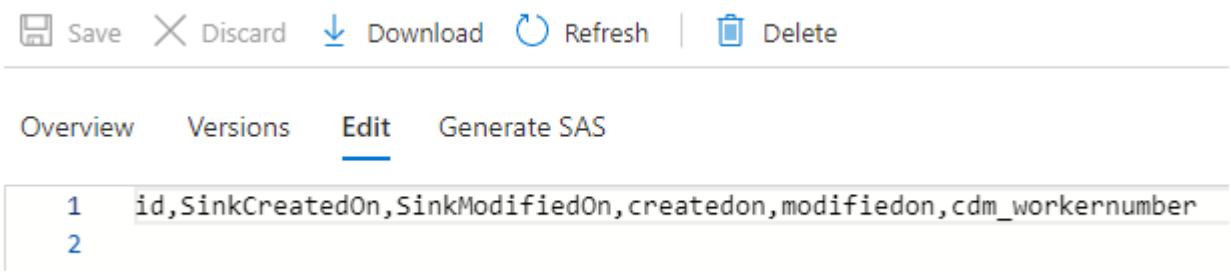
Issue

No data is shown in Data Preview or after running pipeline. Only headers are shown.



Customer was using manifest.json for CDM.

Resolution

Manifest document describes the CDM folder eg. what entities you've in the folder, references of those entities, and also the data which corresponds to this instance.

When we checked customer's manifest document, we found it was missing dataPartitions information which tells ADF where to read the data and since it was empty it was returning zero data.

You may refer the example manifest document here: https://docs.microsoft.com/en-us/common-data-model/cdm-manifest#example-manifest-document
