

# Check the activity log for publish, deleting linked services, git config, etc

Last updated by | Jackie Huang | Jan 4, 2022 at 12:24 AM PST

---

Check the activity log for the scenarios (e.g., publish, deleting linked services, git config, etc)

## Issue

Customer wants to know the ADF modified history, such as publish, deleting linked services, git config, etc.

Customer wants to know who made changes to ADF contents.

## Scenarios

Copy activity:

- Create or Update any Data Factory/Pipeline/ Linked Service/Trigger.
- Start/ Stop/ write Trigger.

GIT related:

- Create or Update any Data Factory.(collaboration branch is a property inside the datafactory entity, that's why it belongs to this operation)

Data Flow related:

- Execute Data Flow debug command.
- Add/ Create/ Query Data Flow to debug session.

Other:

- Create role assignment

## Steps

Let customer follow below steps to check the audit log.

1. Go to Azure portal.
2. Go to ADF -> Activity Log
3. Set Timespan during issue happened. Add key words to search the specific history.
4. Check the operation and who made the operation.
