Issue

Error 45440: "Cannot create a Managed Instance as there are not enough available ip addresses in the selected subnet."

Investigation/Analysis

Please check "Why enough IP addresses?" in the [Architecture](#) page.

Mitigation

The best option for the customer here is to create new instance in a new (and bigger) subnet. Afterwards customer can recreate the databases using cross instance point in time restore.

Public Doc Reference

[Determine VNet subnet size for Azure SQL Database Managed Instance](#)
