Disable SSL on Azure PostgreSQL DB through ARM

20 de março de 2018
10:35

You should be able to disable SSL by adding "sslEnforcement": "Disabled" to your server properties like:

```
"apiVersion": "2017-12-01-preview",  
"type": "Microsoft.DBforPostgreSQL/servers",  
"kind": "",  
"location": "[parameters('location')]",  
"name": "[parameters('serverName')]",  
"properties": {  
  "version": "[parameters('version')]",  
  "administratorLogin": "[parameters('administratorLogin')]",  
  "administratorLoginPassword": "[parameters('administratorLoginPassword')]",  
  "storageProfile": {  
    "storageMB": "[parameters('skuSizeMB')]",  
    "backupRetentionDays": "[parameters('backupRetentionDays')]",  
    "geoRedundantBackup": "[parameters('geoRedundantBackup')]"  
  },  
  "sslEnforcement": "Disabled"  
},
```

Created with Microsoft OneNote 2016.
