Issue

Customer is trying to publish changes to the Tumbling Window Trigger and getting the following error:

Error code: BadRequest

Inner error code: RerunTriggerEnabledCannotUpdateParentTrigger

Message: Cannot update the Trigger; rerun range trigger: backfill needs to be disabled first. ;

Resolution

This error occurs when the customer rerun a trigger and the rerun trigger is in a Running state - The customer should stop the rerun triggers and then perform the operation of create or update on the trigger. This is by design.
