

DSS002.1 - Management Issues

Last updated by | Keith Elmore | Apr 5, 2021 at 7:57 AM PDT

Management operations can be:

- CreateOrUpdate Sync Group
- Update Sync Group
- Delete Sync Group
- CreateOrUpdate Sync Member
- Update Sync Member
- DeleteSyncMemberAsync
- DeleteSyncAgent
- CreateSyncAgent
- TriggerSync
- CancelSync
- RefreshSyncHubFullSchemaAsync
- RefreshSyncMemberFullSchemaAsync

You start by listing the operations:

```
MonManagement
| where logical_server_name =~ '{ServerName}'
| where event contains '_sync_'
| where TIMESTAMP >= ago(3d)
| project TIMESTAMP, request_id, event, logical_server_name, logical_database_name, sync_group_name, workflow_
```

Then you can use the request_id to get more details (if any)

```
MonManagement
| where request_id == ""

MonManagementExceptions
| where request_id == ""
```

How good have you found this content?
