Customer Ask

Customer want some of their traffic goes through proxy server, some requests not, which current SHIR UI does not support

Solution

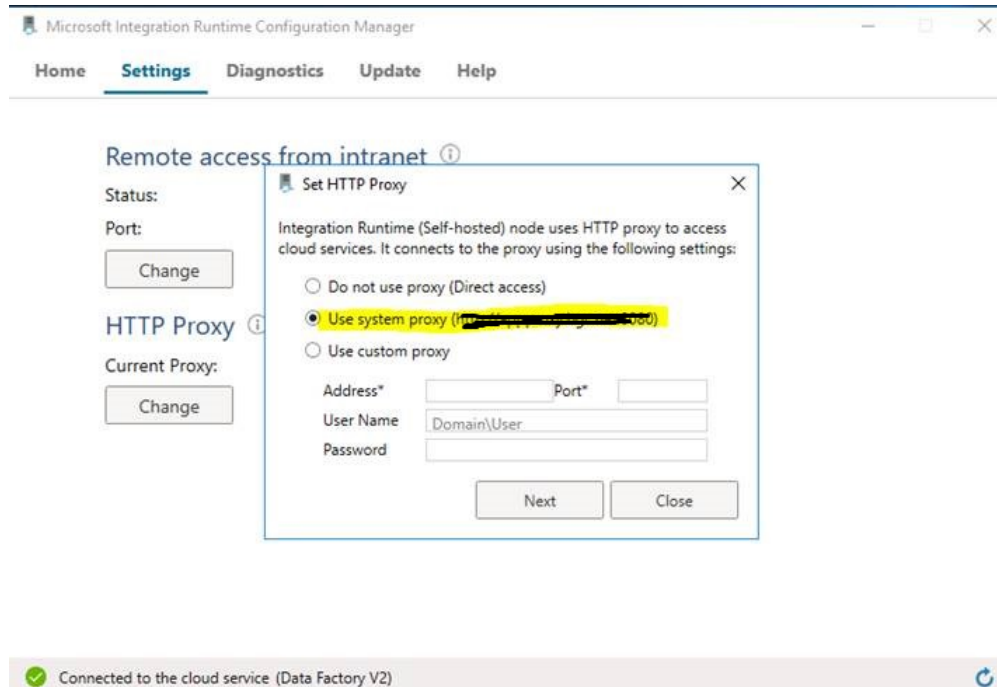

open the installation folder of the SHIR, open diahost.exe.config and diawp.exe.config

```
<system.net> <defaultProxy> <bypasslist> <add address="[a-z]+\google\.com$" /> </bypasslist> <proxy bypassonlocal="true" proxyaddress="http://127.0.0.1:8888" /> </defaultProxy> </system.net>
```

for more info: <https://docs.microsoft.com/en-us/dotnet/framework/configure-apps/file-schema/network/proxy-element-network-settings>

the sample means: all the requests goes through proxy: <http://127.0.0.1:8888>, except the request to any host match: [a-z]+\google.com\$

this change will be kept during update. Note: in the SHIR configure UI, remember to choose Use system proxy:
