Issue

Customer unable to publish changes from Git enabled data factory. Getting the following error:

Unable to load publish config file, default values will be used. Please verify that the 'publish_config.json' JSON file in your repository is not malformed and try again.

Resolution

1. Verify if the publish_config content is as per below settings in the JSON:

The screenshot shows a web interface for a file named `publish_config.json`. Below the filename are tabs for `Contents`, `History`, `Compare`, and `Blame`. The `Contents` tab is selected. The file content is displayed as a single line of JSON: `1 { "publishBranch": "adf_publish", "includeFactoryTemplate": true }`.

2. If the settings are fine, then refer the following steps to resync the changes:
 - Disconnect Git
 - Reconnect Git with settings - Import existing resources to repository -> Create New branch
 - Make a Pull Request to compare the collaboration branch with this new branch
 - Verify if all the changes are present in the collaboration branch
 - Publish from the collaboration branch
