	201059- [SAP OpenHub]RFC Method OutOfMemory		ASC Onboard
Monday, July 22, 2019 06:36			

SME	()
Symptoms	Customer wants to read data from SAP OpenHub, and hit error like this: OutOfMemory Kusto Query: CustomLogEvent where ActivityId == <InputActivityId> where Message contains 'OutOfMemory'
Cause	It is because the underneath RFC method cannot afford to read such large volume of data in one time.
Resolution	Here is the solution: In the Open Hub configuration, set the package size of the DTP with a smaller number such as 50,000.

Created with Microsoft OneNote 2016.
