201069 [SAP HANA] Get OverflowException

Wednesday, July 31, 2019

10:00 AM

SME	
Symptoms	Customer wants to read data from SAP HANA to Azure SQL Database or Azure SQL DW with the data type "NCLOB" finding that it failed with error like this: Value was either too large or too small for an Int16.Couldn't store 1073741823 in NumericPrecision Column
Cause	This is because SAP HANA driver have some issue for this type, it will return a too large value "1073741823" as precision, in .NET framework, precision can only be Int16, which is smaller than 1073741823.
Resolution	Upgrade IR version to >= 3.20.7159.1

Created with Microsoft OneNote 2016.
