## Issue

I am following instructions to set 'Database mail profile' on SQL MI. I am trying to choose mail profile on SQL agent properties --> Alert system. I am getting below error:

TITLE: Microsoft SQL Server Management Studio

---

Alter failed for JobServer '[mimanagedinstance.eus1f94e81eeacdd.database.windows.net](#) 

Stored procedure sp\_set\_sqlagent\_properties is not supported in SQL Database Managed Instance. (Microsoft SQL Server, Error: 41905)

## Investigation/Analysis

Sql agent is ready only and we don't have to do above step.

We already enabled it by default, this is why you have to use hardcoded version for profile name  
**AzureManagedInstance\_dbmail\_profile**

Again, the important thing here is that you need to specify AzureManagedInstance\_dbmail\_profile as the email profile that will be used to send the notifications.
