## Issue

Error message contains below:

Hit an error when running the command in Azure Databricks. Error details: {error message}

## Root Cause

The error is thrown from Azure Databricks Cluster. Need to involve Azure Databricks Team for trouble shoot.

## Trouble shoot

How to find the databricks command that runs in Azure Data Factory?

For azure IR:

CustomLogEvent | where ActivityId == "66122d66-b129-4657-91a7-cf5d1d71bf23" and Message contains "{error message}"

For Selfhost IR:

TraceGatewayLocalEventLog | where UserReportId == "19ec9fa3-54ba-46a8-89f6-5b2b64b0335f" and LocalTraceLevel == "Error" and LocalMessage contains "{error message}"

You can see the log following below pattern:

Failed in running command {command}. Command Id: bcdf3f2d-0261-464a-90f8-6cfa9aae3b93. Summary : {error message}, Cause: {cause}
