Check IR operation failure

Tuesday, January 7, 2020
2:44 PM

SME																																																																									
Symptoms	<p>When customer's operation on IR failed with any error, click F12 to see whether the error shown in the Network response.</p> <p>Also check below kusto query in Adf:</p> <pre>ApiOperationEvent where SubscriptionId == '<subId>' where DataFactoryName == '<df>' where * contains '<ir>' project operationName, resultType, resultSignature, TraceCorrelationId</pre> <p>Find the corresponding API failure, and pick one TraceCorrelationId and search in table:</p> <pre>AdfTraceEvent where TraceCorrelationId == '<trace correlation id>'</pre> <p>You could find the error in this table, if the failure happens in ADMS side, check below table using:</p> <pre>Operations where ActivityId == '<trace correlation id>'</pre> <pre>Exceptions where ActivityId == '<trace correlation id>'</pre>																																																																								
Cause																																																																									
Resolution
