Availability configuration

Monday, December 17, 2018
4:21 PM

ADF v2

When a customer attempts to update the start time / offset time in a Pipeline that is currently in deployment they get the error:

Updating the availability section of a Dataset is not supported. Existing availability configuration: Frequency=Day, Interval=1, AnchorDateTime=01/01/0001 00:00:00, Offset=06:00:00, Style=StartOfInterval, new availability configuration: Frequency=Day, Interval=1, AnchorDateTime=01/01/0001 00:00:00, Offset=07:00:00, Style=StartOfInterval.

When the customer attempts to update the offset dataset that is currently deployment they will get the error:

: The activity schedule does not match the schedule of the output dataset. Activity: "Activityname" .Dataset: "DataSetName"

```
"availability": {  
  "frequency": "Day",  
  "interval": 1,  
  "offset": "06:00:00"  
},
```

THE FIX: The work-around is to delete the datasets and related pipelines and re-create them with the new settings.
