Issue

Dataflow job failing with the following error:

```
Error
{
  'errorCode': '136',
  'message': 'Internal Server Error:Unexpected failure during execution. Please retry. If problem persists,
  'failureType': 'SystemError',
  'target': 'Full Orders',
  'details': []
}
```

<LogProperties><Text>[MappingDataflowExecution] MappingDataflowExecutor.GetStateAsync has failed with unknown error message. Check <https://docs.microsoft.com/en-us/azure/data-factory/concepts-data-flow-performance> for any recommendations that could help resolve the failure
errorCode:SystemErrorMappingDataFlowClusterFailed runId:30aa4707-c1cf-4626-9e22-1ac60043c117
activityId:30aa4707-c1cf-4626-9e22-1ac60043c117</Text></LogProperties>

Resolution

This error is mostly due to the Dataflow performance - OutOfMemory issues. Kindly check:

1. If customer is running the memory optimized compute with sufficient number of cores. Suggest customer to use a higher configuration cluster.
2. If the source is SQL, then [SQL partitioning](#) is recommended.
3. In case of file base source/sinks, default partitioning is recommended for performance.
4. Refer this [TSG](#) for more performance related suggestions.
