

Dataflow preview with no data

Last updated by | Xiaotong Zhang | Feb 8, 2023 at 1:16 AM PST

Scenario

Dataflow preview fails with schema but no data in the UX.

Troubleshooting

This can happen when the data has a big data row size in case of XML data source.

This is by design and Dataflow has `debugDataPreviewSizeLimit` which is 3670016 (about 3.5Mb), when data size is over the limit, we will cut the data rows until it less than the limit. If the data has only one big row over the limit, it cannot be preview.

Actual Dataflow pipeline don't have this limit, the data can be correctly read and transformed in dataflow activity.
