Issue

Customer unable to upload Dag files to the Airflow environment

Root Cause

Managed Airflow cannot import dag files due to below reasons

- does not support private storage accounts (Managed vNet) during Public preview.
- customers connecting to own datasources/onprem data sources will fail to load files as airflow does not support to connect onprem storage accounts.
- fails connecting Storage behind Firewall

Resolution

All the datasources\Storage connecting through airflow should be publicly accesssable
