

# Auditing

Last updated by | Hamza Aqel | Jan 23, 2023 at 5:19 AM PST

---

Check this Blog post [Audit Logging and Azure Active Directory in Azure Database for PostgreSQL Flexible servers.](#)  which will guide you to enable the audit with some useful log analytics queries, and it covers the following scenarios:

- 1- Audits in Azure database for PostgreSQL flexible server with PostgreSQL Authentication.
- 2- Audits in Azure database for PostgreSQL flexible server with Azure Active Directory Authentication, which will cover:
  - A- Active Directory Users without (not part of) Azure AD group.
  - B- Active Directory Users that are part of Azure AD group.
  - C- Mix of A and B; you have mix of Active Directory Users that are part of AD groups and others are not.
