

# Troubleshooting Sink Format and Connector Issue

Last updated by | Jackie Huang | Jan 4, 2022 at 12:24 AM PST

**NOTE:** This TSG is currently under review...

Dataflow uses Azure Data Movement Service to read data from source or write to the sink storage. So, if there are issues in reading data from source or writing to sink storage check the **CustomLogEvent** to find the cause of the error:

Execute: [Web] [Desktop] [Web (Lens)] [Desktop (SAW)] <https://azuredmprod.kusto.windows.net/AzureDataMovement>

```
CustomLogEvent
| where ActivityId == "XXXXXXXXXXXXXXXXXXXXXXX"
| where PreciseTimeStamp >= ago(1h)
| project PreciseTimeStamp, Role, TraceMessage, Message, EventName, TraceComponent, StatusCode
| sort by PreciseTimeStamp asc
```
