Issue

When the customer tries to check the Job history no results are returned. The Jobs are running though.

Investigation/Analysis

Check *sysjobhistory* table on msdb. This table has a limit of 1000 rows, 100 rows per job.

This means that, if it is an environment with a high number of jobs and / or executed frequently, the Job history can be lost.

Mitigation

This is by design, and SQL Agent settings cannot be changed like mentioned [here](#) .

Customer can use the following [workaround](#) .

Internal reference

[343196937](#) .
