Check update SLO workflow in Kusto

Get Finished Operations

3 parts that are concatenated also run them with a qualifier to match it up with the start event request ids we got above

```
AlrManagement
|where event == "management_operation_success" or event == "management_operation_failure" or event == "management_operation_cancelled"
|project request_id
```

```
MonManagement
|where event == "management_operation_success"
|project request_id
```

```
MonFSM
|where event == "fsm_end_workflow" or event == "fsm_interrupt_workflow"
|project request_id
```

Get Stuck FSM Positions

```
MonFSM
|where "request_id" contains "request_id" and event == "fsm_join_workflow" or event == "fsm_leave_workflow"
|project originalEventTimestamp, workflow_position, state_machine_type, event, keys, transaction_id
```

```
MonManagement
| where request_id =~ "36bdb15c-9f36-4eb7-9194-00dfd4743b69"
| summarize min(TIMESTAMP), max(TIMESTAMP) by old_state, new_state, state_machine_type
| extend duration = max_TIMESTAMP - min_TIMESTAMP
| where old_state != ''
| order by duration desc
```

Get Management Operation Released Time

```
MonManagement
|where "request_id" contains "request_id" and event == "fsm_changed_state" and old_state == "Pending" and new_state == "Released"
|summarize originalEventTimestamp=min(originalEventTimestamp) by request_id
```
