Issue

Customer is unable to create Azure IR with Managed VNet enabled. Getting error:

Failed to save <IRName>. Error: Failed to save integration runtime. Invalid reference to the managed Virtual Network 'default'. The managed Virtual Network does not exist

Customer has configured Git repo to sync his data factory.

Resolution

VNet does not exist in the data factory, only customer's Git repo. This error means that the customer attached a Git Repo that already has files. Specifically, it has a managedVirtualNetwork folder in that repo.

To fix the issue, customer can delete the folder from the repo and try to create the VNet IR again, which would create the managed VNet as well.
