## Issue

My customer want to know if Azure SQL Managed Instance support availability zones in these regions - UK South, Southeast Asia, East Asia & Central India. If not, what is the ETA for those regions?

## Public Doc Reference

Azure SQL Managed Instance is not mentioned in this public documentation which means it doesn't support availability zones now. [Azure Services supporting Availability Zones](#) 

## Mitigation

Managed Instance does not yet support AZ deployments. This is work in progress targeting 2nd half of 2021 for public preview. Please be noted that this ETA is not committed.
