## Issue

Customer had an issue wherein his pipeline wasn't showing all the triggers when using the Github Integration. Moreover, when manually searching the trigger, we couldn't find the trigger listed:

## Cause

The issue was that they were only seeing some of their triggers, but not all of them. The issue is that the customer's factory was attached to a GitHub repository, but they had over 1,200 triggers in their github repo. According this [documentation](#), GitHub has a known limitation where we can only pull up to 1,000 of an specific resource type, so that is why the customer was only seeing 1,000 of their 1,200+ triggers in the ADF UI.

## Resolution

In order to mitigate or resolve this, the customer will need to either use a DevOps repository, or consider splitting their resources up into multiple factories if they want to continue to use GitHub.
