Issue

Customer gets the error below when trying to send an email

Msg 22050, Level 16, State 1, Line 112 - Failed to initialize sqlcmd library with error number -2147467259

This will happen if the customer is using the @query parameter, along with an AAD user.

Investigation/Analysis

This error can be caused by a SELECT on a table that doesn't exist.

On this case was thrown because sp_send_dbmail only works with singleton users.

Mitigation

By design.
