

4 DBs per MI Online migration

Last updated by | Balaji Barmavat | Nov 30, 2020 at 11:02 PM PST

Contents

- [Behavior:](#)
- [Error:](#)
- [Screenshot:](#)

Behavior:

When using 1 project with source On-Prem and destination of Managed Instance with 'Online' migration scenario, the source databases cannot exceed 4 count. This is by design.

Scenario tutorial: <https://docs.microsoft.com/en-us/azure/dms/tutorial-sql-server-managed-instance-online>

Error:

```
{
  "resourceId": "/subscriptions/SubscriptionId*/resourceGroups/RG/providers/Microsoft.DataMigration/serv
  "errorType": "Migration settings validation error", "errorDetail": "More than max number '4' objects of 'Dat
  selected for migration." }
```

Backup settings

Ensure that the service account running the source SQL Server instance has write privileges and the service account running the target SQL Server instance has read privileges on the network share that you provide.

* Network share location that Azure Database Migration Service can take database backups to

Make sure the Windows user has read access on the network share that you created above...
The Azure Database Migration Service will impersonate the user credential to upload the backup files to Azure storage container for restore operation.

* Windows User Azure Database Migration Service impersonates to upload files to Azure Storage

Password

Storage account settings

* Select the subscription containing the desired storage account

Select a Storage account created in location 'South Central US' and configured for standa... performance tier that allows Azure Database Migration Service to upload database backup files to and use for migrating databases to a Azure Sql Managed Instance. Use this link to learn more about creating a Storage account

* Storage account that Azure Database Migration Service will upload the files to
