[SSIS IR] SSIS IR running limited

Wednesday, August 7, 2019
12:22 PM

Background

When the SSIS IR is running limited status, check the IR status detail from ADF portal, and there is detail message show.

Some known customer issue,

Error Code: CustomSetupScriptBlobContainerInaccessible

Error Message: Your integration runtime cannot be upgraded and will eventually stop working, since we cannot access the Azure Blob container you provided for custom setup.

This means ADF cannot access the configured blob container which contains the custom setup script, it is either caused by SAS Token expired or customer firewall block the container.

If the blob container SAS URL set by customer is expired, Ask customer to create a SAS token with longer expired date.

If the blob container does not exist or access blocked, ask customer create a new blob container or unblock the access.

Then ask customer stop the SSIS IR, configure the SSIS IR with new SAS URL, and start the SSIS IR again.

Note this impact customer IP upgrade, his IR will not be able to be upgraded but it does not impact the functions used by customer now.

Created with Microsoft OneNote 2016.
