## Issue

Web Activity failing with the following error:

Execution failed. Error message:

'Type=Microsoft.DataTransfer.Execution.Core.ExecutionException,Message=Invoking Web Activity failed with **HttpStatusCode - 'Unauthorized'**.,Source=Microsoft.DataTransfer.Execution.WebActivityExecutor,StackTrace=at Microsoft.DataTransfer.Execution.WebActivity.WebActivityExecutor.<ExecuteAsync>d\_\_40.MoveNext()

## Resolution

The POST request is failing because the authentication credentials (bearer token in this case) is being rejected to perform that operation. Please ask the customer to double check the way they are getting the bearer token, and try again.

Actually, it would be useful if they try first with postman or another similar utility to simulate the request that they want to do, and then, repeat the same steps using ADF.
