This is a difference between Azure Database for PostgreSQL and PostgreSQL on-premises.

If you issue a GRANT command for which you have no permissions for, on-premises you get this:

```
GRANT ALL ON DATABASE db1 TO user1 WITH GRANT OPTION;
```

```
WARNING: no privileges were granted for "db1"  
GRANT  
Query returned successfully in 89 msec.
```

In Azure Database for PostgreSQL you get:

```
GRANT ALL ON DATABASE db1 TO user1 WITH GRANT OPTION;
```

```
GRANT  
Query returned successfully in 245 msec.
```

Created with Microsoft OneNote 2016.
