## Issue

Check/Uncheck **Include System Columns** field gives confusion to customers. If brief about purpose makes the customer check/uncheck

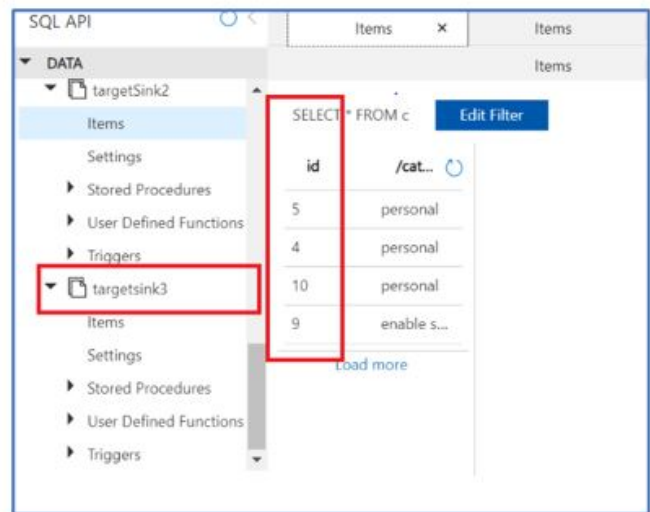

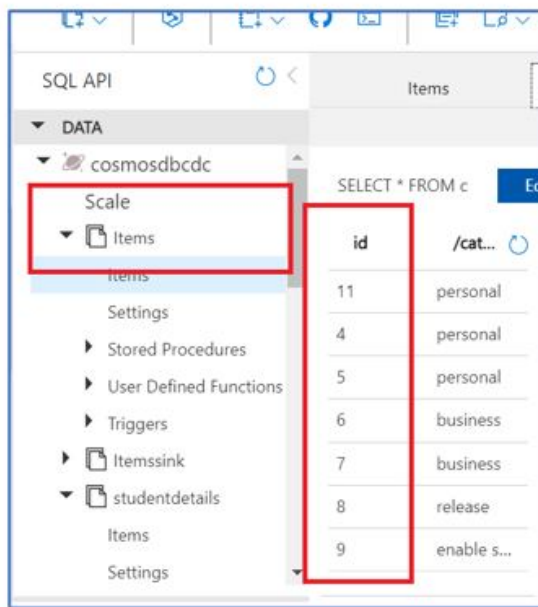

## Root Cause

Suggestion to include Public documentation with Include System Column check/uncheck

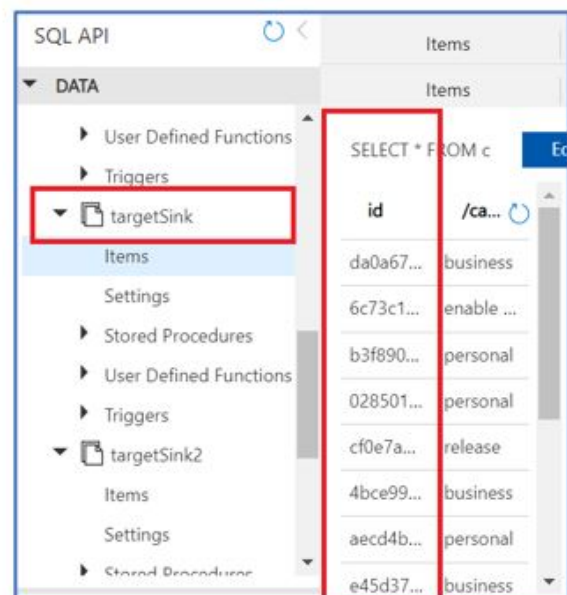

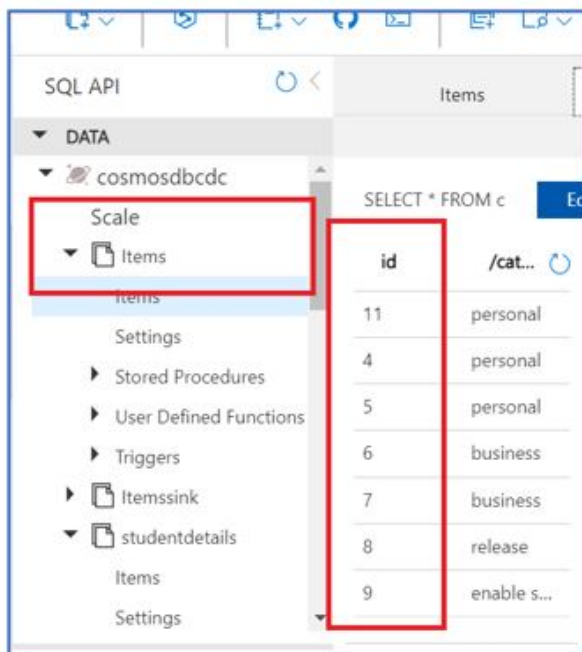

Check/Uncheck Include System Column field gives confusion to customer. If brief about the purpose makes the customer to check/uncheck. If System Column field checks, source, and sink collection will be having same data

for the "Id" column

If the System Column field unchecks, source and sink collection will be having different data for the "Id" column

**Note:** Accounted this feedback and taken for backlog item to complete in future
