How to install Azure Data Studio from your Mac

Microsoft Azure Data Studio (formerly called SQL Operations Studio) is a lightweight management tool for managing SQL Server. Azure Data Studio is free, and it's available for macOS, Linux, and Windows.

Here are instructions for installing it on a Mac

1. Download Azure Data Studio Go to the [Azure Data Studio download page](#) and click the .zip file for macOS (there are also options for Windows and Linux if you need them).

2. Install Azure Data Studio Once the .zip file has downloaded, double-click it to expand its contents. Then drag the .app file to your Application folder (it will probably be called Azure Data Studio.app).
3. Launch Azure Data Studio Launch Azure Data Studio (by clicking on its icon in your Launchpad or the Applications folder).
4. Connect to SQL Server

Server Name: localhost

- **Authentication Type:** SQL Login
- **User name:** sa
- **Password:** myPassw0rd
- **Database Name:** <default>
- **Server Group:** <default>

You've now connected to SQL Server with Azure Data Studio. Once logged in, the Server Dashboard is displayed:
