

Deploy support file with cloud shell

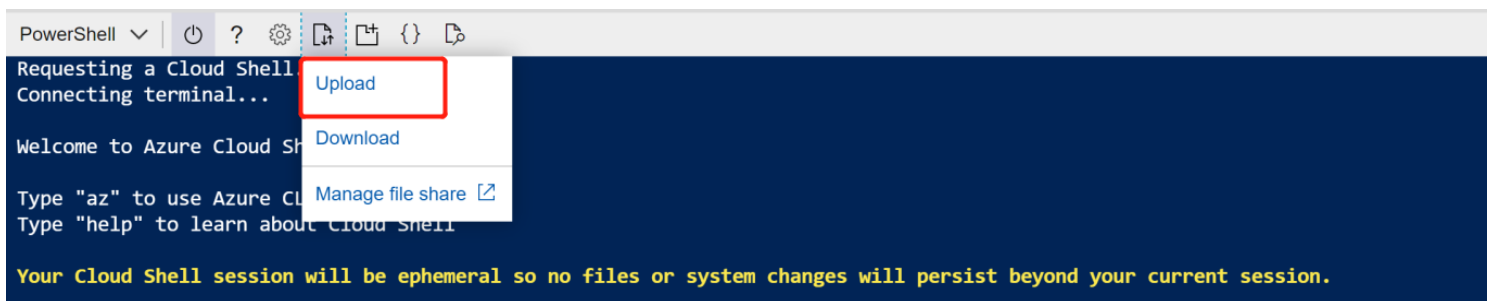

Last updated by | Jackie Huang | Jan 4, 2022 at 12:24 AM PST

Important!!!

Before you start this tutorial, please **DO** complete the prerequisite section in

[How to setup new Lab environment for troubleshooting](#) 

1.Upload ADF pipeline support file to cloud shell disk.

2.Run the following command replacing the parameters with your own information:

```
& './clouddrive/DeploySupportfileV4.ps1' '<SUB_ID>' '<RESOURCE_GROUP>' '<DATAFACTORY_NAME>' '<SUPPORTFILE NAME>'
```

- <SUB_ID>: **Your own** Subscription where the support file will be deployed
- <RESOURCE_GROUP>: Name for the new Resource Group which you want to deploy this support file
- <DATAFACTORY NAME>: The datafactory name which you want to deploy this support file
- <SUPPORTFILE NAME>: The file name of the support file which you just uploaded (**Please do not include .zip file extension**)
