

Data Sync - Detailed logging when installing sync agent

Last updated by | Keith Elmore | Apr 5, 2021 at 7:57 AM PDT

If you need to enable detailed logging when installing sync agent:

More details/instructions could be found here (<http://www.advancedinstaller.com/user-guide/qa-log.html> .

Basically you need to enable all tracing excepting verbose & debugging. In this case, you can run:

```
msiexec.exe /i "SQLDataSyncAgent-2.0-x86-ENU.msi" /L* "SQLDataSyncAgent.log"
```

Ask customer for me the SQLDataSyncAgent.log file.

(Got this from Xiao, DSS engineering team)

How good have you found this content?
