## Issue

Current design of the maximum number of firewall rules for server-level or database-level is 256. The customer wants to create more firewall rules than the maximum limit.

## Investigation/Analysis

n/a

## Mitigation

Open an IcM ticket with Gateway and request to increase the limit.

## RCA Template (optional)

n/a

## More Information (optional)

n/a

## Public Doc Reference (optional)

[Azure SQL Database and Azure Synapse IP firewall rules](#)

## Internal Reference (optional)

Confirm SQL DB firewall limit is set

Open logicalserverconfigurationoverview.xts view from XTS and check the [Logical Server overrides] tab where it should show the current settings for FirewallRulesMaxCount value.

CAS command example to set the firewall rule limit (for your reference):

```
Set-ServerConfigurationParameters -ServerName fotestsql1
-Parameters @('Worker.ISO\SQL.Config_FirewallRules_FirewallRulesMaxCount',
'Worker.ISO.Premium\SQL.Config_FirewallRules_FirewallRulesMaxCount')
-Values @('256', '256')
```

As per ICM below, PG recommends not exceeding 22000 rules ([number of server level rules] x [number of SQL instances]) for a single logical server. Each logical server has N databases. The number of instances here is the sum of singleton databases (non elastic pools) plus all the elastic pools.
