Issue & Symptoms

Customer use Snowflake connector and try test connection, but failed with error like "The value of the property 'index' is invalid: 'Index was out of range. Must be non-negative and less than the size of the collection.

Parameter name: index"

Cause

The password contains "&", which is also the split char of JDBC connection string, so ADF backend failed to parse the connection string.

Resolution

Use Azure Key Vault for password property, or change a new password which doesn't contains "&"
