## Issue

If you see something like this:

```
"Response": "[{"internal_wellbore_id":"guid1","internal_well_id":"guid2"}]"
```

instead of something like this

```
"Response": [ {"internal_wellbore_id":"guid1","internal_well_id":"guid2"} ]
```

## Resolution

then the issue is the response body was unable to be parsed by `JSONObject.Parse()` for some reason.

The best bet here is to get the RAW body of the response using Postman to see if there is an issue with the data itself.
