Scope

In case you want to see what ADF user is seeing in their Dataflow Monitoring page for a specific activity, you may use follow the following steps to achieve that:

Notes:

1. This will be used for only the customer dataflows that are hosted in Microsoft Tenant. Not supported for other customer tenants.
2. In order to view this, you should have a dataflow debug/activity run already ran in your data factory monitoring page.
3. If you are trying to import to see a failed output run, you must have failed output in your data factory monitoring page. if we open a Dataflow which is passed, then monitoring shows as everything passed, rather than actual result.

Step : 1

In any factory (within our Microsoft tenant), go to any Dataflow monitoring and add a feature flag like in URL **&feature.dataFlowMonitorImport=true**.

Below is the original dataflow monitoring view:

«

All pipeline runs > CdmEncodingTest - Activity runs > Data flow1

✔ Data flow1

Cluster startup time: 4s 647ms Number of transformations: 2

↻ Refresh

Auto refresh

On ⓘ

✎ Edit dataflow

✎ Import

SinksAll streams

Sink	Status	Processing time ↑↓	Highest processing time
sink1	✔ Succeeded	6s	1s 995ms

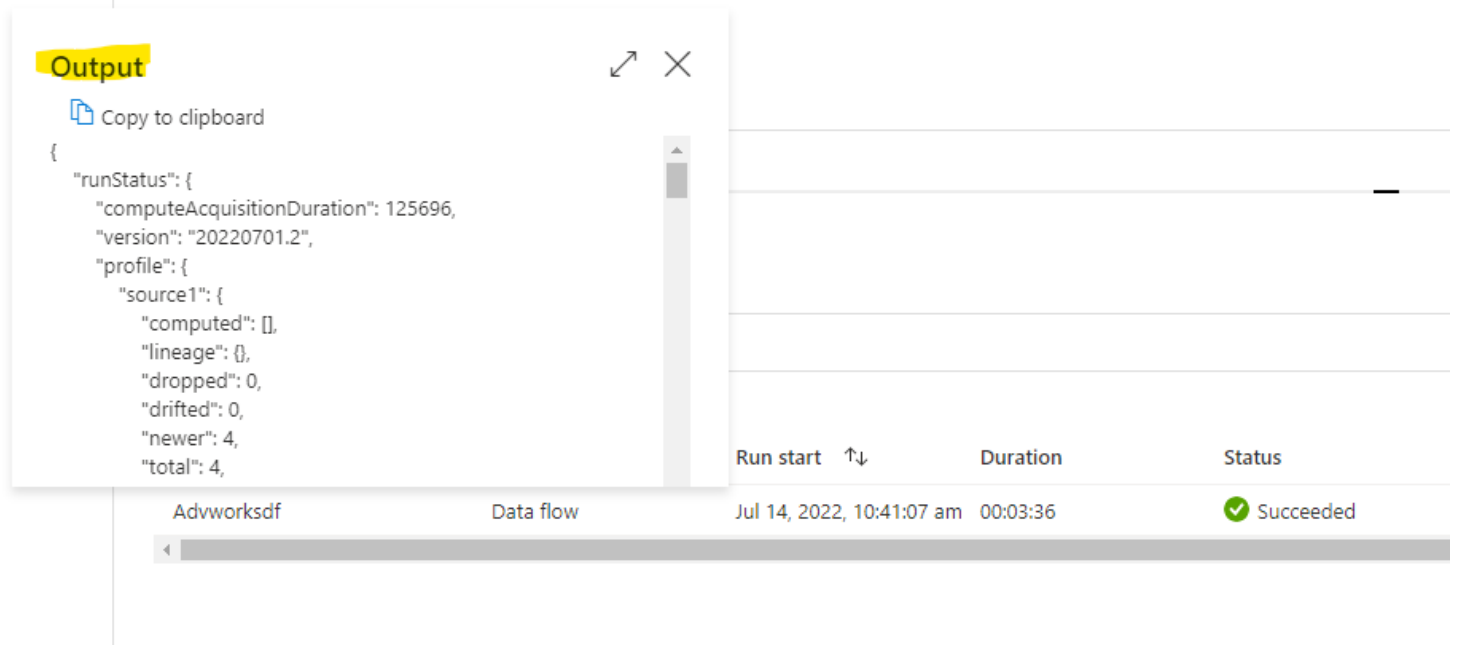

Step :2

Copy the Activity Output Json from other Dataflow activities.

Activity output JSON:

https://supportability.visualstudio.com/AzureDataFactory/_wiki/wikis/AzureDataFactory/659135/Customers-Monitoring-view-of-a-Dataflow-activity-output

2/4

Output

Copy to clipboard

```
{
  "runStatus": {
    "computeAcquisitionDuration": 125696,
    "version": "20220701.2",
    "profile": {
      "source1": {
        "computed": [],
        "lineage": {},
        "dropped": 0,
        "drifted": 0,
        "newer": 4,
        "total": 4,

```

	Run start	Duration	Status
Advworksdf	Jul 14, 2022, 10:41:07 am	00:03:36	✓ Succeeded

Step:3

Paste the whole activity JSON in the dialog box.

17ms Number of transformations: 2

Edit dataflow

Import

Import

dataflow activity json output *

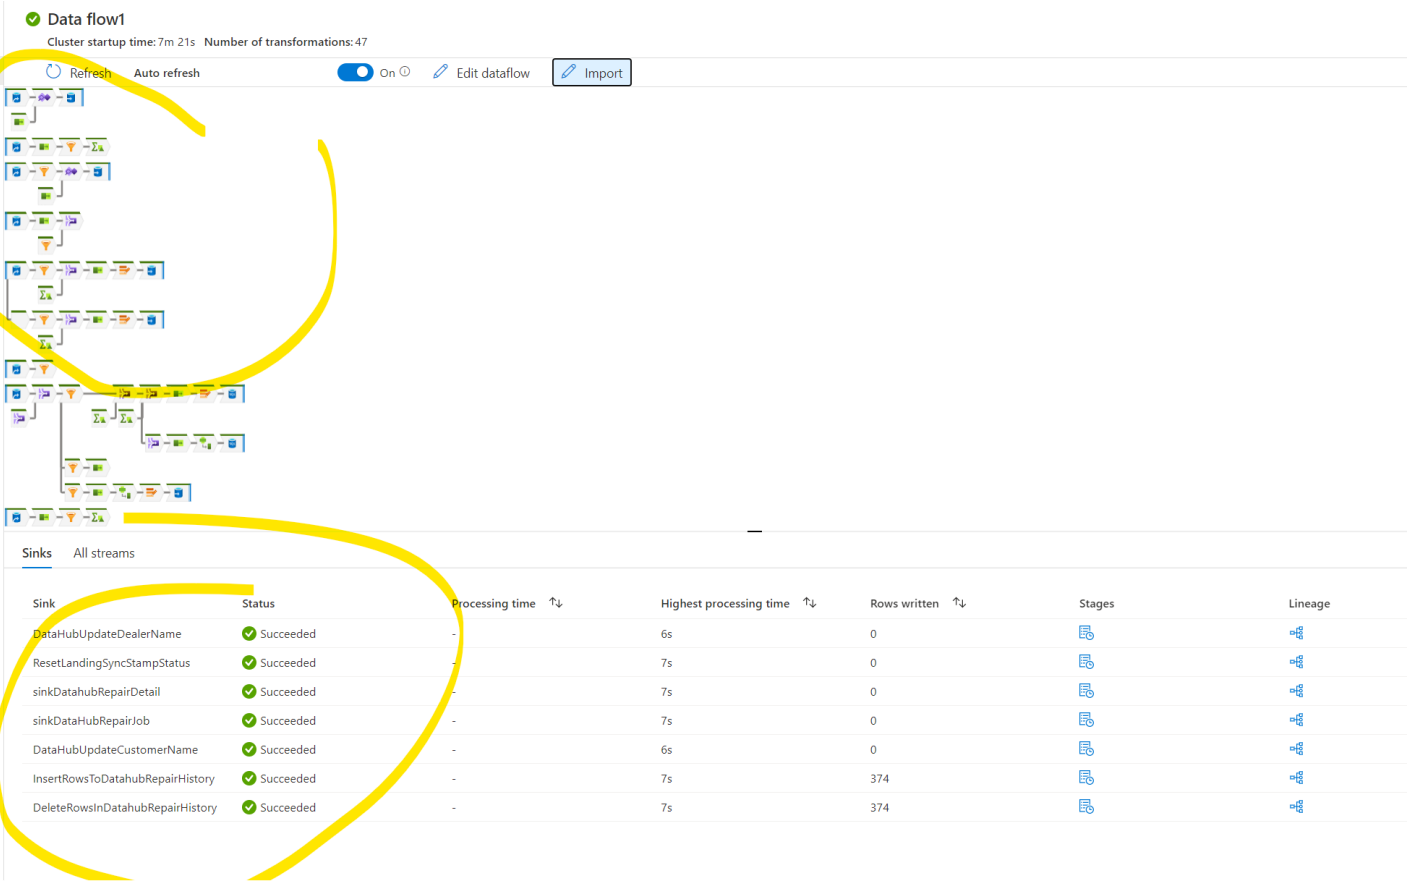

```
{
  "runStatus": {
    "computeAcquisitionDuration"
```

OK

Cancel

Step:4

Below is how dataflow monitoring shows. This is helpful to see what customer sees.
