

[MongoDB] Failed to read MongoDB source when char encoded with non-UTF8 encoding

201086 [MongoDB] Failed to read MongoDB source when char encoded with non-UTF8 encoding

Thursday, November 14, 2019
12:43 PM

SME	
Symptoms	When reading some char encoded by non utf-8 MongoDB, it will fail.
Cause	ADF uses MongoDB C# driver which has strict UTF8 decoding, which results such exception when any UTF8 string returned from server is not 100% UTF8 compliant. And currently ADF doesn't have any option to set other encoding when reading from Mongo DB, and customer will need to exclude the columns/rows with such characters for now.
Resolution	To resolve this: Customer need to exclude such column or row when reading from Cosmos DB
More Information	
Tags	CosmosDB Mongo API; Mongo DB
