

DSS011 - Data Sync - Get logs from the portal (UIHistory)

Last updated by | Keith Elmore | Apr 5, 2021 at 7:57 AM PDT

You can get the complete errors customer is seeing in the portal using the following query.

You need to request customer to connect to sync metadata db and send you the results of this query.

```
SELECT TOP(30) ui.[completionTime], sg.[name] SyncGroupName, ud.[server] ServerName, ud.[database] DatabaseName,
CAST (ui.detailStringParameters as XML).value('(/ArrayOfString/string/node())[1]', 'nvarchar(max)') as Error
FROM [dss].[UIHistory] AS ui
INNER JOIN [dss].[syncgroup] AS sg ON ui.syncgroupId = sg.id
INNER JOIN [dss].[userdatabase] AS ud ON ui.databaseid = ud.id
WHERE sg.[name] = 'SyncGroupName'
--WHERE ud.[server] = 'aaa.database.windows.net' AND ud.[database] = 'aaa'
ORDER BY ui.[completionTime] DESC
```

How good have you found this content?
