Issue

Customer found their SQL Agent jobs stopped unexpectedly. The Activity Monitor and Job History had no corresponding log to check.

Investigation/Analysis

SQL Server Agent job would be interrupted during MI maintenance(failover). So you need to check if there is any scheduled maintenance or unexpected failover happened around issue time.

Insight for failed logins due to Planned Updates and insight for failed logins due to UpdateSLO (compute or storage scaling) are now available in MI.

Otherwise, you can use Kusto query to check:

```
MonSQLSystemHealth
| where TIMESTAMP >= datetime(2020-07-30 00:00:00)
| where LogicalServerName == "testMI"
| summarize min(TIMESTAMP), max(TIMESTAMP) by code_package_version, NodeName
```

Classification
