Issue

SQL user is unable to connect to SQL MI and hits following error.

Note:- State 147 is specific to SQL Logins.

TITLE: Connect to Server

Cannot connect to [XXXXXXX.public.XXXXXXX.database.windows.net](#) ,3342.

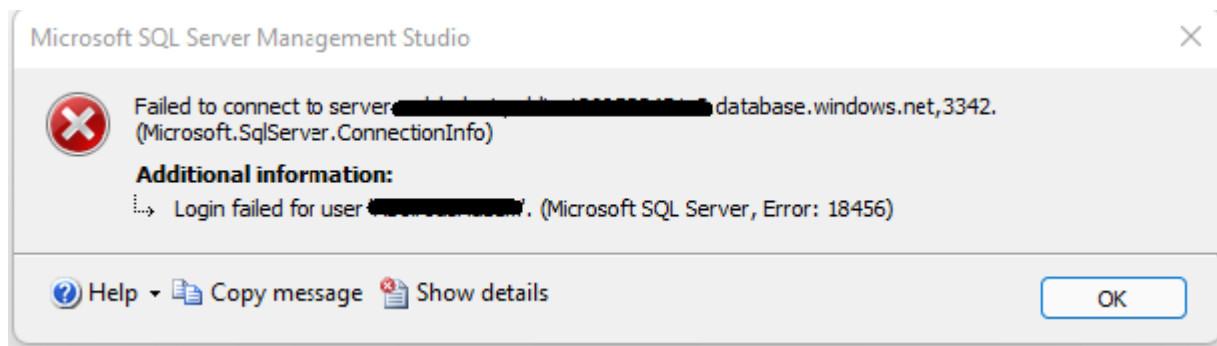

ADDITIONAL INFORMATION:

Login failed for user 'XXXXXXX'. (Microsoft SQL Server, Error: 18456)

For help, click: <http://go.microsoft.com/fwlink?ProdName=Microsoft SQL Server&EvtSrc=MSSQLServer&EvtID=18456&LinkId=20476>

BUTTONS:

OK

Troubleshoot

You could use ASC or Kusto to get the error state as the error message from SSMS/user side would just show error code 18456 without any state.

Using Azure Support Center

Using ASC you may be able to navigate to the following table and get the error state

| Drag a column header and drop it here to group by that column | | |
|---|-------|-------|
| package | error | state |
| sqlserver | 18456 | 147 |
| sqlserver | 18456 | 147 |
| sqlserver | 18456 | 147 |
| sqlserver | 18456 | 147 |
| sqlserver | 18456 | 147 |
| sqlserver | 18456 | 147 |
| sqlserver | 18456 | 147 |

Manual investigation using Kusto

You may also use Kusto and query monlogin table to get the error state for affected user/server.

```
MonLogin
| where logical_server_name == "servername" or LogicalServerName == "servername"
| where originalEventTimestamp between (datetime(2020-12-03 18:00) .. datetime(2020-12-03 19:00))
| where event == 'process_login_finish' || where AppTypeName == 'Gateway.PDC'
| where database_name == 'DBNAME'
| summarize count() by error, state, lookup_state, lookup_error_code, database_name, instance_name, fabric_alias
```

| error | state | lookup_state | lookup_error_code | database_name | instance_name | fabric_alias | fabric_instance_uri | ModelName | AppTypeName | count_ |
|-------|-------|------------------|-------------------|---------------|--|--|--|-----------|-------------|--------|
| 18456 | 147 | 0 | 0 | PubSub | DB2.tr9.canadacentral1-a.worker.database.windows.net | DB.2 Worker.CL | 470150 | 346 | | |
| 0 | 0 | SERVICE_ENDPOINT | 0 | PubSub | DB2.tr9.canadacentral1-a.worker.database.windows.net | fabric:/Alias.PDC/XDBAlias/todsd001/master | fabric:/Worker.CL/a77fb0efba53/SQL.ManagedServer.LS/a77fb0efba53 | DB.1 | Gateway.PDC | |
| 0 | 0 | SERVICE_ENDPOINT | 0 | PubSub | DB2.tr9.canadacentral1-a.worker.database.windows.net | fabric:/Alias.PDC/XDBAlias/todsd001/master | fabric:/Worker.CL/a77fb0efba53/SQL.ManagedServer.LS/a77fb0efba53 | DB.2 | Gateway.PDC | |
| 0 | 0 | SERVICE_ENDPOINT | 0 | PubSub | DB2.tr9.canadacentral1-a.worker.database.windows.net | fabric:/Alias.PDC/XDBAlias/todsd001/master | fabric:/Worker.CL/a77fb0efba53/SQL.ManagedServer.LS/a77fb0efba53 | DB.0 | Gateway.PDC | |

Mitigation

The error 18456 with state 147 is caused due to:-

Login-based server access validation failed with an infrastructure error. Login lacks Connect SQL permission. SecFCheckSrvAccessNoConnectSQLPermissionSQLAuth.

Since the user is missing connect sql permission, we will need to grant the user required permission. You may use following t-sql and grant the 'connect sql' permission to affected SQL user.

```
grant connect sql to <username>;
```

Classification

Cases resolved by this TSG should be coded to the following root cause:

Root Cause: Azure SQL v3/Connectivity/Login Errors/Other
