Issue

Customer couldn't enable Managed VNet setting on the default AutoResolveIR during ADF deployment:

Basics Git configuration Managed identities Encryption Networking Tags Review + create

Managed virtual network

Choose whether you want the default AutoResolveIntegrationRuntime to be provisioned on demand inside an ADF-managed virtual network. If this setting is disabled, after the data factory is created, you can still choose whether to provision explicitly created Azure integration runtime inside an ADF-managed virtual network.

[Learn more](#)

Enable Managed Virtual Network on the default AutoResolveIntegrationRuntime

☐

This option missing for customer

Resolution

User needs to have Contributor role access at the subscription level to enable Managed VNet.
