Issue

Job failed with user error 'com.microsoft.cdc.common.SinkDBConnectionFailedException: The connection to the sink database is failed. Detailed error message is: Login failed for user '<token-identified principal>'. ClientConnectionId:xxxx' and will NOT be restarted.

Root Cause

We are using the managed identify of the synapse workspace to connect to sink dedicated sq pool. And by default it should have access, but access could be removed by admin.

Resolution

Please ensure that the synapse workspace managed identity has access to the dedicated sql pool.
