Issue

Unable to create Power Query activity (formerly known as Wrangling Data Flow), getting error "Power Query is not supported in prod-<region>"

Cause

The issue happens if the customer has created Data Factory using PowerShell or REST API, and has provided the region name with spaces "north europe". UX is unable to recognize it.

Currently, when we create a data factory through an API, the user can specify their region with spaces, and then the location of the factory's metadata states the location with spaces. In the UI, we are assuming that the factory's location doesn't have spaces (which is the case if the factory is created through Azure Portal).

Workaround

PG has created a workitem to fix this issue in the UX.

Temporary solution for now would be to use a factory whose location doesn't have spaces in the name, or a factory that was created directly from portal in order to access Power Query.

Supported Regions

Power Query (Wrangling data flow) is supported in data factories created in following regions:

- Australia East
- Canada Central
- Central India
- East US
- East US 2

- Japan East
- North Europe
- Southeast Asia
- South Central US
- UK South
- West Central US
- West Europe
- West US
- West US 2

New regions we added support are,

- Brazilsouth
- Eastasia
- Francecentral
- Koreacentral
- Northeurope
- Australiasoutheast
- Southafricanorth
