com:443/session/v1/login-request?

Resolution:

The customer had not given the account name in the format that was given in our document Snowflake account (including additional segments that identify the region and cloud platform), e.g. XXXXXXXX.east-us-2.azure. Here is the Public doc link ⧉ Changing the account name format resolved the issue. Also, the role should be one of the below but the default will be Public.
