Contents

Issue

My customer is moving from on-prem SQL to Azure SQL MI.

Their API uses MSDTC. Since Azure SQL MI does not support MSDTC/Elastic transactions, what would we recommend as a work around?

Public Doc Reference

Distributed transactions

Neither MSDTC nor Elastic Transactions are currently supported in Managed Instance.

https://docs.microsoft.com/en-us/azure/sql-database/sql-database-managed-instance-transact-sql-information

Mitigation

Unfortunately at this moment, they have choice either to remove dependency or use SQL VM with full SQL Server installation.
