202045 [Dynamics] Import schema or preview missing / incomplete column

Tuesday, November 12, 2019
10:45

SME	
Symptoms	Customer using import schema or preview and he may found some of the columns are missing
Cause	This is a by-design behavior that ADF won't be able to show a column which does not have a value in the first 10 records If you see "The valid structure information (column name and type) are required for Dynamics source." Please make sure the column you added is in correct format. (Column name and type should not be empty)
Resolution	Manually add the column in mappings tab [Explicit mapping](#)
More Information	

Created with Microsoft OneNote 2016.
