SAP ODP: [HowTo]Kusto query for troubleshooting

Contents

Logs in Cloud Table

```
cluster('azuredmprod.kusto.windows.net').database('AzureDataMovement').CustomLogEvent
| where * contains <activityId>
```

Logs in SHIR

Follow this TSG to upload SHIR log and get report id first:
https://supportability.visualstudio.com/AzureDataFactory/_wiki/wikis/AzureDataFactory/290129/Self-Hosted-IR-Logs-Gather-and-Evaluate

Then use below query to check the logs

```
cluster('azuredmprod.kusto.windows.net').database('AzureDataMovement').TraceGatewayLocalEventLog
| where UserReportId == <reportId> and LocalTraceSource == "Integration Runtime (Self-hosted) Connectors"
and LocalTimestamp >= <activityStartTime> and LocalTimestamp <= <activityEndTime>
```

How good have you found this content?
