VNET Initial Checks

Last updated by | Vitor Tomaz | Aug 5, 2020 at 12:40 PM PDT

Contents

- Scenario
- To do

Scenario

Performing Initial Checks on Vnet environment.

To do

Please ensure that for any Vnet issue you run this query from CRGW00041 VNET: Issues and validations (Web view)

MonManagementExceptions | where exception_type == "FiniteStateMachineUserException"

| join kind= inner (

   MonManagementVnetFirewallRule | where logical_server_name =~ "<server_name>"

   | project request_id, subnet_name , vnet_name

) on request_id

| summarize by request_id , message, vnet_name, subnet_name

The issues for which CRIs have been opened (that could have been avoided) are listed at top of the page i.e.

   a. Vnet feature is not available in that region
   b. Vnet and Sql Database are in different regions
