Common Errors & Fixes- Web Activity

Error Code	Error Message	Description	Possible Fix/Recommended Action
2001	The length of execution output is over limit (around 1M currently)	UserErrorExecutionOutputOverLength	From the error, it looks like the request has a very large input body. Currently, it is by design and technical limitation not supported to send a large data in headers or body. The limit for request body is 1 MB. The limit for output content is 4 MB. Unfortunately, there are no plans to increase these capacity limits any further. Suggest using multiple POST requests to break this large input content into smaller chunks to satisfy the current capacity limits as a workaround.
2108	Invalid HttpMethod: '.'.	This means that Http method specified in the activity payload is not supported by Web Activity.	The Http methods that are supported are PUT, POST,GET, DELETE
2108	Invalid Server Error 500	Internal error on the endpoint	Check the functionality on the URL (with Fiddler/Postman) : How to use Fiddler to create an HTTP session of
2108	Unauthorized 401	Missing valid authentication on request	Provide valid authentication method (token may have expired). Check the functionality on the URL (with Fiddler/Postman) How to use Fiddler to create an HTTP session of
2108	Forbidden 403	Missing required permissions	Check user permissions on the accessed resource Check the functionality on the URL (with Fiddler/Postman) How to use Fiddler to create an HTTP session of
2108	Bad Request 400	Invalid Http request	Check the URL, verb and body of the request. Use Fiddler/Postman to validate the request. How to use Fiddler to create an HTTP session of
2108	Not found 404	Resource was not found	Use Fiddler/Postman to validate the request. How to use Fiddler to create an HTTP session of
2108	Service unavailable	Service is unavailable	Use Fiddler/Postman to validate the request. How to use Fiddler to create an HTTP session of
2108	Unsupported Media Type	Mismatched Content-Type with the Web activity body	Specify the correct Content-Type that matches the payload format Use Fiddler/Postman to validate the request. How to use Fiddler to create an HTTP session of
2108	The resource you are looking for has been removed, had its name changed, or is temporarily unavailable.	The resource is not available	Use Fiddler/Postman to check the endpoint. How to use Fiddler to create an HTTP session of
2108	The page you are looking for cannot be displayed because an invalid method (HTTP verb) is being used.	Incorrect Web activity method was specified in the request	Use Fiddler/Postman to validate the request. How to use Fiddler to create an HTTP session of
2108	The length of execution output is over limit (around 1M currently).	The output of the web activity is too large.	This a limitation of output activity size, customer should limit the output size
2108	invalid_payload	The body for Web activity is incorrect	Use Fiddler/Postman to validate the request. How to use Fiddler to create an HTTP session of
2108	Error calling the endpoint	Generic error returned when the end point cannot be reached and there is not response	Common issues: • End point is not responding • End point is hosted in private VNet which is not supported • Transient issue with activity execution, add more retries Use Fiddler/Postman to validate the request. How to use Fiddler to create an HTTP session of
